GMR SAMPLE SHIPPING INSTRUCTIONS

Shipping and customs brokerage will be needed when shipping samples to GMR's laboratory in Canada.

It is recommended that the sender use a well known carrier to ship: DHL, Bollore Logistics, UPS or Fedex.

The shipper is responsible for all shipping/freight fees and any and all customs clearance charges.

GMR will clear the samples through customs using our broker and will bill the shipper (you) for any brokerage fees once your samples have cleared customs.

The address to ship the samples to is:

Global Mineral Research Ltd.
8023 Enterprise St.
Burnaby, BC
V5A 1V5
Canada

All samples that are sent to GMR must be labelled "**Mineral Samples**"

IMPORTANT: Do not include "Gold" in the description on the shipping documents, this will ensure the samples do not get held up at customs.

Clearly label each sample within your shipment with the location it is from and company information and send an abstract of what the shipment contains to info@gmrlaboratory.com

The sender must CC Melodie Devlin-Joyal at info@gmrlaboratory.com on all correspondence with the shipping company and customs broker so the package can be tracked until it is delivered.
